

TEHOPESU (Power Cleaner)

DESCRIPTION	To clean various indoor and outdoor surfaces: Tehopesu has a bleaching effect on darkened/weathered wood.
EXAMPLES OF USE	Ideal for washing and enhancing painted and unstained surfaces such as wooden patios, fences, walls, garden furniture and lattices and for cleaning plastic surfaces.
TECHNICAL DATA	Density: 1.0 kg/l, ISO 2811 Thinner: Water
SPECIFICATIONS	
Preparation	Wear suitable protective clothing, protective gloves, safety goggles or a face mask. Protect plants against splashes. Avoid splashing clothes and, for example, unstained garden furniture and fittings. The product has a slight bleaching effect.
APPLICATION	Methods: Brush and roller
Mixing	Stir a can (0.5 l) of Tehopesu into 5 litres of cool water in an open plastic container. Leave for about 15 minutes. Stir again before application. The solution should be used within 2-4 hours from when the last granule has dissolved. The solution is alkaline (pH >10).
Washing	Use a brush or roller to apply the solution generously to the surface you wish to clean and leave for 15-30 minutes to take effect. Leave for about 10 minutes with hardwood surfaces and furniture. For a consistent result, apply more of the Tehopesu solution as required to keep the surface being cleaned moist. In warm, sunny weather you can first moisten the surface with water to prevent the solution from drying too quickly. Apply several times if the surface is very dirty/darkened. Avoid splashing on clothes, face and plants. Use a brush or pressure washer to wash the surface and rinse thoroughly with water. Do not use pressure washers at excessive pressure since this can easily cause splintering in old, discoloured wood. Use a washer that does not scratch ("e.g. scrubbing brush, coarse scouring pad, a fine stainless steel braiding or similar). Once the surface has dried, use the above tools to remove the wood fibre rising to the surface after treatment.
Coverage	0.5 l Tehopesu powder (0.5 litres or ready-made solution) is enough for about 15 square metres depending on the absorbency of the base and how dirty it is.
Finishing	We recommend painting painted surfaces after treatment with Tehopesu.
Cleaning of Tools	Wash in water
ENVIRONMENTAL	Destroy product by allowing all the crystals to dissolve completely in water; the weak solution can then be rinsed into drain. Product is biologically degradable.
HEALTH AND SAFETY CLASSIFICATION according to EC Directive 99/45/EC	Contains: Sodium carbonate peroxyhydrate. CONTACT WITH COMBUSTIBLE MATERIAL MAY CAUSE FIRE. HARMFUL IF INHALED/SWALLOWED. IRRITATING TO EYES AND SKIN. Contains < 5 % anionic surfactants, > 30 % oxygen-based bleaching agents and 5 - 15 % polycarboxylates. A Material Safety Data Sheet is available on request.

**STORAGE AND
TRANSPORT**

NB! The product is oxidising, please read the warning. Store the powder away from the sun in a cool (under 30°C), dry place in its original container.
