

LamecoAirLock®

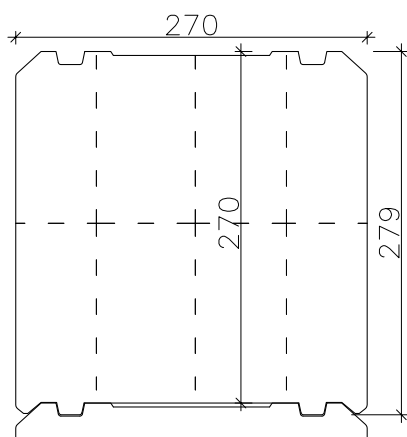

Notch

Lameco's patented notch type

New building regulations require buildings to have a thick structure with a good thermal conductance coefficient and air tightness.

The patented and tested **LamecoAirLock®** corner solution guarantees 50 % better sealed timber corners.

LamecoMassiveLog®

Laminated logs

Even more massive log from Lameco!

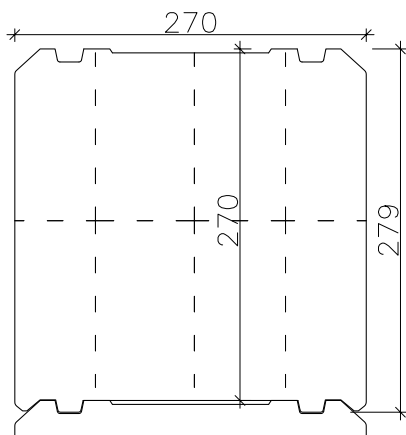

LamecoMassiveLog® is even stronger than before.

From the beginning of year 2010, domestic regulations in Finland prequire the U-value of a timber wall to be max must reach $0.40 \text{ W}/(\text{K} \cdot \text{m}^2)$.

Lameco has responded to the tightening requirements by presenting a new 270 mm thick timber. The 270 mm timber glued from eight different pieces will give the timber building a truly aesthetic appearance.

Lameco offers the 270 mm timber as preforms, profiled timber and also as readymade frames.

Request samples of our new timber.
